

E-Learning Services for Companies with Software Assurance Benefits

Hosting services for your free Microsoft e-Learning courses

The Microsoft Software Assurance e-Learning benefit provides access to interactive training developed by Microsoft experts.

What is important to know?

Technical courses for IT Professionals

These courses cannot be integrated into an LMS (Learning Management System). This is because they provide virtual labs, that must be hosted on the Microsoft website and are therefore only accessible online. From October 2008 bitmedia and all of our partners will offer free access to the technical contents of the Server pool via our own portal or those of our partners. In order to gain access, companies with SA benefits need only present us or one of our partners, with their Software Assurance credentials.

Courses for Information Workers

All courses in the Applications and Systems pool can be integrated into an LMS. Microsoft does not provide any technical support for the integration of the free Information Worker content into an LMS. Although the contents are SCORM compliant there are various restrictions and technical requirements which can affect the successful integration (e.g. LMS operating system, webserver etc.). As a result of this the utilisation of free e-Learning contents has so far been very low.

bitmedia has, however, developed a solution to this in the form of a portfolio of services for Software Assurance customers, making it easy for them to benefit from the full range of advantages offered by their free e-Learning contents.

Services for SA Customers

1. Integration into a Customer LMS

If you are already using an in-house LMS which is not technically equipped to host the free Microsoft contents, then we can provide a hosting solution to enable integration into your LMS. For such services we will provide an individual offer and integration concept.

2. Learning Center SA Plus

We can provide a company branded ASP Learning Center for SA customers, with the learning content as well as all the functions required to manage users, reports and blended learning already available. You need only to upload your list of employees and you can start your training activities right away.

Your advantages with e-Learning

Learn whenever you want

Learn with all of your senses

Check your learning progress yourself

Repeat the contents as often as you like

Learn through practical examples

Save money
